Zambia Meteorological Department

### **Seven days Weather Forecast**

**05 – 11<sup>th</sup> February, 2018**

#### **GENERAL SITUATION**

The period 5 to 6<sup>th</sup> February, 2018, the Intertropical Convergence Zone (ITCZ) which is the main rain bringing system will be oscillating about central and southern parts of Zambia resulting into increased afternoon showers and thunderstorms over much the country. The period from 7 to 11<sup>th</sup> February, 2018, the ITCZ will be oscillating about the southern border of Zambia causing wide spread rainfall across the country. During the same period a deep low pressure system associated with the ITCZ will be centred over Western Province. This will result into heavy falls with high chance of flash floods/floods over Western and Southern Province.

#### **Forecast for the Period 5- 6<sup>th</sup> February.2018**

**Lusaka and Southern Province:** Partly cloudy to cloudy with a chance of morning rain, increased afternoon showers and thunderstorms.

**The Rest of Zambia:** Mainly cloudy with morning rain, Increased afternoon showers and thunderstorms.

#### **Forecast for the Period 7-11 February, 2018**

**All Areas:** Cloudy with outbreaks of rains and thunder. Heavy falls over Western and Southern Province.

**Warning: Flash floods and floods expected over Shang'ombo, Sesheke, Livingstone, Kazungula and surrounding areas.**
