ZAMBIA EVENING WEATHER FORECAST: THURSDAY (12/11/2026)

SUMMARY:

A moist and unstable airflow from the northwest (Congo air) is influencing the weather over the northern half of Zambia, resulting in mainly cloudy conditions with rainfall activities. The southern half of the country is still under the influence of a relatively moist airflow from the southeast, leading to partly cloudy, windy at times and hot to very hot weather conditions.

FORECAST FOR TONIGHT: THURSDAY (12/11/2026)

Northwestern, Copperbelt, Luapula, Northern, Muchinga, Central and Eastern Provinces including the northern parts of Western Province:

Mainly cloudy, windy at times and mild with isolated rain and occasional thunder.

Southern and Lusaka Provinces including the southern parts of Western Province:

Partly cloudy, windy at times and mild with a slight chance of rain and occasional thunder.
